Designing with Found Materials

This is an opportunity for 15 state school students (age 14-18). This after school club is part of STORE STORE BUILD, a small scale building project run as a series of free after school clubs in architecture, engineering, urban ecology and construction.

Designing with Found Materials is an after school club exploring the potential of using found and bio-based materials in designing a new building. Across eight sessions students will work in groups to develop architectural ideas from conception to physical models. These models will form a basis for the future development of the new building in Hackney.
